SECTION XIII - DIAGNOSTIC TESTING

NOTE: For VA purposes, exams for all heart conditions require a determination of whether or not cardiac hypertrophy or dilatation is present. The suggested order of testing for cardiac hypertrophy/dilatation is EKG, then chest x-ray (PA and lateral), then echocardiogram. An echocardiogram to determine heart size is only necessary if the other two tests are negative. Also for VA purposes, if LVEF testing is not of record, but available medical information sufficiently reflects the severity of the veteran's cardiovascular condition, LVEF testing is not required.

SECTION XIV - METs TESTING

NOTE: For VA purposes, all heart exams require METs testing (either exercise-based or interview-based) to determine the activity level at which symptoms such as dyspnea, fatigue, angina, dizziness, or syncope develop (except exams for supraventricular arrhythmias.)

If a laboratory determination of METs by exercise testing cannot be done for medical reasons (e.g. chronic CHF or multiple episodes of acute CHF within the past 12 months), or if exercise-based METs test was not completed because it is not required as part of the veteran's treatment plan, or if exercise stress test results do not reflect veteran's current cardiac function, perform an interview-based METs test based on the veteran's responses to a cardiac activity questionnaire and provide the results below.

14A. INDICATE ALL TESTING COMPLETED PROVIDING ONLY MOST RECENT RESULTS WHICH REFLECT THE VETERAN'S CURRENT FUNCTIONAL STATUS.
(Check all that apply):

Exercise stress test Date of most recent exercise stress test: _____
Results: _____
METs level the veteran performed, if provided: _____

Interview-based METs test Date of interview-based METs test: _____
Symptoms during activity:
The METs level checked below reflects the lowest activity level at which the veteran reports any of the following symptoms (check all symptoms that the veteran reports at the indicated METs level of activity):
 Dyspnea Fatigue Angina Dizziness Syncope
 Other, describe: _____

Results:
METs level on most recent interview-based METs test:
 (1-3 METs) This METs level has been found to be consistent with activities such as eating, dressing, taking a shower, slow walking (2 mph) for 1-2 blocks
 (>3-5 METs) This METs level has been found to be consistent with activities such as light yard work (weeding), mowing lawn (power mower), brisk walking (4 mph)
 (>5-7 METs) This METs level has been found to be consistent with activities such as walking 1 flight of stairs, golfing (without cart), mowing lawn (push mower), heavy yard work (digging)
 (>7-10 METs) This METs level has been found to be consistent with activities such as climbing stairs quickly, moderate bicycling, sawing wood, jogging (6 mph)
 The veteran denies experiencing above symptoms with any level of physical activity

14B. IF THE VETERAN HAS HAD BOTH AN EXERCISE STRESS TEST AND INTERVIEW-BASED METs TEST, INDICATE WHICH RESULTS MOST ACCURATELY REFLECT THE VETERAN'S CURRENT CARDIAC FUNCTIONAL LEVEL:

0% 10% 20% 30% 40% 50% 60% 70% 80% 90%

The limitation in METs level is due to multiple factors; it is not possible to accurately estimate this percentage.

14D. IN ADDITION TO THE HEART CONDITION(S), DOES THE VETERAN HAVE OTHER NON-CARDIAC MEDICAL CONDITIONS (such as musculoskeletal or pulmonary conditions) LIMITING THE METs LEVEL?

YES NO

(If "Yes," identify each condition and describe how each non-cardiac medical condition limits the veteran's METs level):

Other medical condition #1: _____ Effect on METs level: _____

Other medical condition #2: _____ Effect on METs level: _____
